

Daquii Brand Guidelines

Version 2.0

Human brand guide and implementation guide for Cursor.

Brand idea

Daquii means from here. The brand is not about finding places on a map. It is about trusted local people helping visitors, villa owners and residents get things done.

Tagline: Tudo o que você precisa, daqui.

Positioning: A bright, premium, tropical services platform connecting visitors with people from here.

1. Brand principles

Human first. Provider faces and real service moments matter more than abstract icons.

Bright and local. The site should feel like a sunny island stay, not a dark nightlife brand.

Premium but approachable. Clean layouts, strong typography and warm colours.

Simple conversion. Visitors should quickly search, trust, and contact via WhatsApp.

2. Logo system

Use lowercase **daquii**. Do not use Daquii, DAQUII or Daqui. The mark is an organic island outline with a palm tree inside. Remove the external decorative dot.

Clear space: keep at least the height of the letter d around the logo.

Use the colour mark on white or sand backgrounds.

Use the white mark on Deep Navy.

Do not stretch, rotate, shadow, outline, or place over busy images.

3. Colour system

Token	Swatch	Usage
Deep Navy #0B1D3A		Primary text, navigation, logo wordmark, high trust UI
Ocean Teal #00C2BB		Primary CTAs, links, active states, icons
Tropical Pink #FF2D6D		Highlights, badges, emphasis
Sunset Orange #FFB62B		Warm accent, gradients, selected states
Sand #FFF7ED		Warm background, cards, soft panels
White #FFFFFF		Main background
Soft Border #E7EEF2		Borders and dividers
Muted Text #5B677A		Supporting copy

Usage ratio: White and Sand 65%, Deep Navy 20%, Ocean Teal 10%, Pink and Orange 5%.

4. Typography

Headings: Montserrat, weights 600, 700 and 800.

Body: Sora, weights 400, 500 and 600.

Use short, confident headings. Use Portuguese by default. Keep copy friendly and practical.

Element	Desktop	Mobile	Weight
Hero h1	64 px	42 px	800
Page h1	48 px	34 px	800
Section h2	36 px	28 px	700
Card title	22 px	20 px	700
Body	16 px	16 px	400
Small	14 px	14 px	500

5. Layout and UI tokens

Token	Value	Usage
Max width	1180 px	Main page container
Mobile padding	20 px	Small screens
Desktop padding	32 px	Large screens
Radius small	12 px	Tags and small controls
Radius medium	18 px	Inputs and filters
Radius large	28 px	Cards and panels
Radius pill	999 px	Buttons
Card shadow	0 18px 50px rgba(11, 29, 58, 0.10)	Provider cards and feature panels

6. Component rules

Primary buttons: Ocean Teal background, white text, pill shape, 48 px height on desktop and 52 px on mobile.

Secondary buttons: Sand or white background, Deep Navy text, soft border, pill shape.

Provider cards: large human photo, name, category, languages, half day rate, trust badges and WhatsApp CTA.

Advertiser cards: logo or image, company name, category, short description, sponsored label and CTA.

Category cards: icon or image, category name, short description and provider count if available.

7. Homepage guidance

Recommended structure: header, hero, search, popular categories, featured providers, how it works, recommended local businesses, trust section, blog or guides, footer.

Hero headline: Pessoas de daqui, para você.

Supporting copy: Conectamos você a profissionais locais de confiança para tornar sua estadia mais fácil.

Primary CTA: Encontrar serviços. **Secondary CTA:** Anunciar na Daquii.

8. Service category pages

Goal: help visitors quickly choose a trusted person.

Structure: category heading, short description, filters, sponsored block, provider list, helpful guide content and FAQ.

Filters should include price, language, area, verified photo and premium listings.

9. Provider profile page

Goal: convert visitors into WhatsApp enquiries.

The provider face is more important than the service icon.

Place the profile photo, name, category, trust badges and WhatsApp button above the fold.

Include intro video, description, rates, languages, service area, gallery, reviews later and similar providers.

10. Provider dashboard

Route: /painel. Use a clean, practical dashboard. Bright colours only for CTAs and status badges.

Include profile completion, listing status, plan, payment status, photos, video and enquiries if tracked later.

Profile completion checklist: photo, description, half day rate, WhatsApp number, languages, service area and intro video.

11. Admin dashboard

Route: /admin. Functional but still on brand.

Use white background, Deep Navy headings, Sand panels, Teal CTAs, Pink warnings and Orange pending states.

Dashboard cards: pending listings, active providers, active advertisers, monthly recurring revenue, failed payments and expiring advertisers.

Tables should use rounded containers, clear status badges and responsive stacked rows on mobile.

12. Advertising pages

Advertising should feel native and premium, not like ugly banner ads.

Recommended businesses page route: /empresas-recomendadas.

Sponsored blocks should use Sand cards, small sponsor logos, short descriptions and CTAs.

Use the label Patrocinado where appropriate.

13. Pricing page

Route: /precos. Include provider listings and local advertising.

Provider plans: Standard, Featured and Premium.

Advertiser plans: Bronze, Silver, Gold and Platinum.

Use bright plan cards, clear pricing and simple CTAs.

14. Illustration style

Use bright daytime island illustrations with warm human interactions.

Scenes: driver greeting visitor, chef preparing food in villa, cleaner preparing home, massage therapist setting up, boat captain welcoming guests, babysitter meeting parents, local guide helping couple and grocery delivery to villa.

Avoid dark night scenes, neon nightclub aesthetics, childish cartoons, stereotypes and too many palm trees.

15. Photography rules

Provider photos should be human first.

Good photos: clear face, natural light, friendly expression, real working context and clean background.

Bad photos: logos only, boats only, cars only, group photos, blurry photos and dark night photos.

16. Trust badges

Use badges sparingly. Examples: Foto adicionada, Perfil aprobado, Premium, Verificado and Responde rápido.

Verified uses Ocean Teal. Premium uses Sunset Orange. Attention uses Tropical Pink. Neutral uses Sand with Deep Navy text.

17. Motion and accessibility

Use subtle hover states only: cards lift by 2 px and shadows increase slightly.

Do not use heavy animation or distracting parallax.

Ensure readable contrast, visible focus states, labelled forms, alt text and status indicators that do not rely on colour only.

18. Cursor implementation checklist

1. Add Daquii design tokens to Tailwind and global CSS.
2. Replace old Bem Servido naming with daquii where appropriate.
3. Add the new logo assets.
4. Update the header with the lowercase daquii wordmark.
5. Update homepage hero using the new brand copy.
6. Restyle buttons using Ocean Teal and pill radii.
7. Restyle cards with white backgrounds, soft borders and rounded corners.
8. Add Sand section backgrounds.
9. Update provider cards to emphasise face photos.
10. Update category cards with rounded icon style.
11. Update pricing page with bright plan cards.
12. Update advertiser sections so they feel native.
13. Update admin portal styling but keep it practical.
14. Update provider portal styling.
15. Replace dark or generic visuals with bright tropical illustrations.
16. Run npm run build and fix all errors.

19. Cursor prompt

Apply the Daquii brand system across this Next.js project. Use the attached design tokens, logo SVG files and this specification. The brand should be bright, premium, tropical, human and trustworthy. Use lowercase daquii. Use an organic island logo mark with a palm tree inside. Remove any extra decorative dot outside the mark. Use Deep Navy for text, Ocean Teal for primary CTAs, Tropical Pink and Sunset Orange as accents, and Sand for warm backgrounds. Use Montserrat for headings and Sora for body text. Restyle the homepage, service category pages, provider cards, provider profiles, pricing, recommended businesses, admin dashboard and provider dashboard. Keep the site mobile first. Do not break existing routes, Supabase, Stripe, provider listings, blog or admin logic. Run npm run build and fix all errors.
